#### **Steps for Log Positioning**

1. Place the back log on the grate pedestal.
2. Place the charred chunk on the front left part of the grate with the charred area facing the middle.
3. Place the middle log diagonally on the grate with the left end of the log behind the chunk and the right end pulled to the front part of the grate. NOTE: the right end of the middle log can be pushed back slightly or pulled all the way forward, depending on the amount of front flame desired.
4. Place the remaining (top) logs in any position on the top of the bottom logs. NOTE: The number of top logs may vary depending on the size of the set.
