

Stealth Burner

The Stealth Burner is the newest innovation from Hargrove Premium Products designed to protect valves and components from the intense Radiant Heat that our log sets produce.

- Purpose-built to protect Valves and Components from Heat
- Incorporates H-Burner for Natural Gas and System 4 burner technology for LP gas
- Efficient reduced-BTU design

Natural Gas Version

Liquid Propane Version

Stealth Burner Details

- **Gas-Specific Models** guarantee optimal performance for both NG and LP gas
- **Custom Fiber Riser** serves as a barrier against burner flame heat
- **Precise Valve Mounting** obscures valve visibility, leaving nothing on the fireplace floor
- **Engineered Air Gaps** further reduces heat transfer
- **Combined Burner/Grate System** Fixed-position design ensures consistent and effective heat protection
- **Reduced BTU Input** for reduced gas consumption and minimized heat exposure to components

Control Options available include:

- Variable Flame with Remote (1F)
- Electronic Ignition with Variable Remote (3F)

Stealth Burner

The **Stealth Burner** features a unique fiber riser that simultaneously adds protection to the valve components and promotes glow and Radiant Heat into the home.
